

# STG6684

#### High isolation dual SPDT analog switch

#### Features

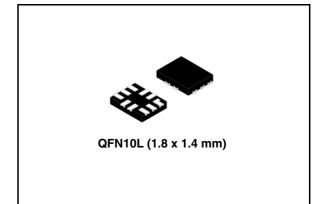

- Ultra high off-isolation:
   -80 dB (typ) at 1 Mhz
- Ultra low power dissipation:
   I<sub>CC</sub> = 0.2 μA (max.) at T<sub>A</sub> = 85 °C
- $R_{PEAK}$  on  $T_n = 1.30 \Omega$  max ( $T_A = 25 °C$ ) at  $V_{CC} = 4.3 V$
- $R_{PEAK}$  on  $S_n = 0.55 \Omega$  max ( $T_A = 25 °C$ ) at  $V_{CC} = 4.3 V$
- Wide operating voltage range:
   V<sub>CC</sub> (opr) = 1.65 to 4.3 V single supply
- 4.3 V tolerant and 1.8 V compatible threshold on digital control input at V<sub>CC</sub> = 1.65 to 4.3 V
- Typical bandwidth (-3 dB) at 65 MHz on Sn channel, 58 MHz on the T<sub>n</sub> channel
- Latch-up performance exceeds 100 mA per JESD 78, Class II
- ESD performance exceeds JESD22 2000-V Human body model (A114-A)

#### Description

The STG6684 is a high-speed CMOS low voltage dual analog SPDT (single pole dual throw) switch or 2:1 multiplexer/de-multiplexer switch fabricated in silicon gate C<sup>2</sup>MOS technology.

The STG6684 is designed to operate from 1.65 to 4.3 V, making this device ideal for portable applications.

The SELn inputs are provided to control the switch operation. The switch Sn is ON (connected to common ports Dn) when the SELn input is held low and OFF (high impedance state exists between the two ports) when SELn is held high.

The switch Tn is "on" (connected to common port Dn) when the SELn input is held high and "off" (high impedance state exists between the two ports) when SELn is held low.

Additional key features are fast switching speed, break-before-make delay time and ultra low power consumption. All inputs and outputs are equipped with protection circuits against static discharge, giving them ESD immunity and transient excess voltage.

### 3 Maximum rating

Stressing the device above the rating listed in the "Absolute maximum ratings" table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the operating sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Refer also to the STMicroelectronics SURE Program and other relevant quality documents.

Symbol	Parameter	Value	Unit
V <sub>CC</sub>	Supply voltage	-0.5 to 5.5	V
VI	DC input voltage	-0.5 to V <sub>CC</sub> + 0.5	V

#### 7 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK<sup>®</sup> packages. These packages have a Lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com.
